FIELD VISIT APP

Adding vacant land

How to create a field visit for a plot that has no building and no street address, using a Google Maps link. It takes about 5 minutes to try.

YOU ASKED

“Most of the property we manage are vacant land, how can we add field visit request which does not have a physical/building address”

This is now built into the app.

You paste the same Google Maps link you sent us, and the app places the pin on the plot for you. No address is needed anywhere.

What you need

- A computer, to create the visit
- A Google Maps link to the plot — the kind you get from the *Share* button
- Nothing else. There is no address to look up and nothing to type in by hand

---

Part 1 · Get the link from Google Maps

On your phone or your computer, whichever you have Maps open on.

1 Drop a pin on the plot

Open Google Maps and find the land. Press and hold on the exact spot until a pin drops, then press *Share* and copy the link.

This is exactly what you did when you sent us this:

`https://www.google.com/maps/place/12°50'07.7"N+80°04'00.8"E/@12.835324 1,80.0665612,144m/data=…!3d12.8354722!4d80.0668889`

> **CHECK**
> You have a link on your clipboard, ready to paste.

Part 2 · Create the visit

On a computer, in the office screen.

2 Press New visit and name the plot

The first box now says *Property name or address*. For vacant land there is no address, so just describe the plot in a way your staff will recognise — a survey number, a plot number, or a landmark.

Whatever you type here is what the person going out will see at the top of their phone screen.

New field visit

Name the property and put the pin on it. For vacant land with no address, paste a Google Maps link below. The representative can only take photos once they are standing there.

Property name or address

Vacant plot, Survey No. 42

No street address? Describe the plot instead — this is what the representative sees at the top of their screen.

Town or city

Bengaluru

PIN code

560025

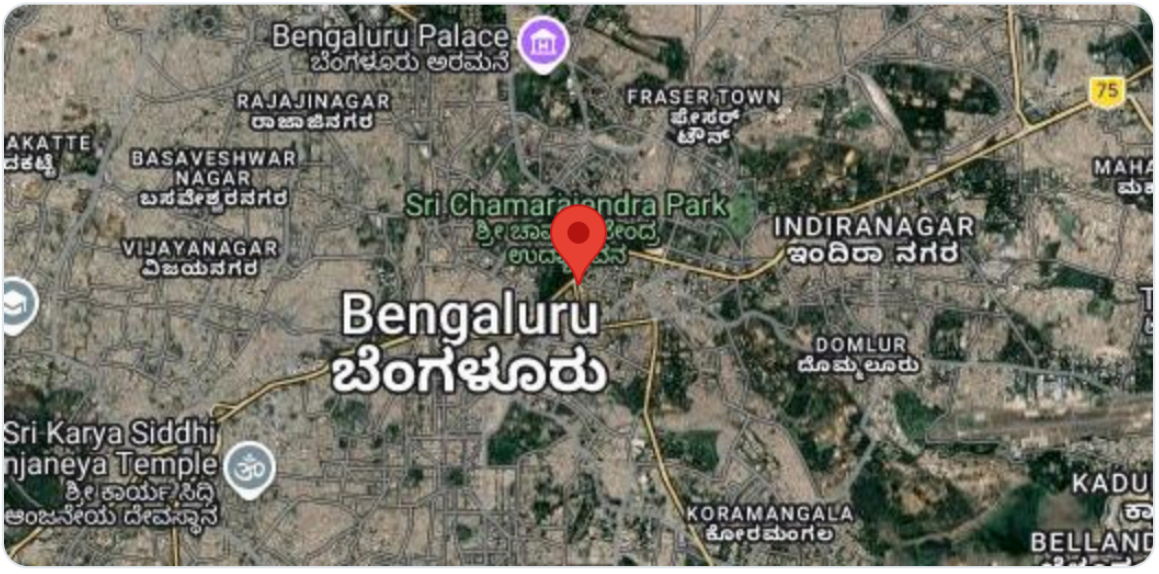

Google Maps link or coordinates

Paste a maps link, or 12.835472, 80.066889

Place pin

Best for vacant land and anything with no street address. In Google Maps, long-press the plot, tap **Share**, then paste the link here.

Or find the address above on the map

Paste a map link above, or tap the map to place the pin on the plot.

Task ID

2609015768

Assigned to (optional)

Ravi

Filled in for you. Replace it with your own reference if you use one.

Naming the plot. No street address is required.

CHECK

The form accepts a description like *Vacant plot, Survey No. 42* with no address.

3 Paste the map link

Paste the link into the box marked *Google Maps link or coordinates*, then press *Place pin*.

If you would rather type the coordinates straight in, that works too — either `12.835472, 80.066889` or the degrees form `12°50'07.7"N 80°04'00.8"E`.

New field visit

Name the property and put the pin on it. For vacant land with no address, paste a Google Maps link below. The representative can only take photos once they are standing there.

Property name or address

Vacant plot, Survey No. 42

No street address? Describe the plot instead — this is what the representative sees at the top of their screen.

Town or city

Bengaluru

PIN code

560025

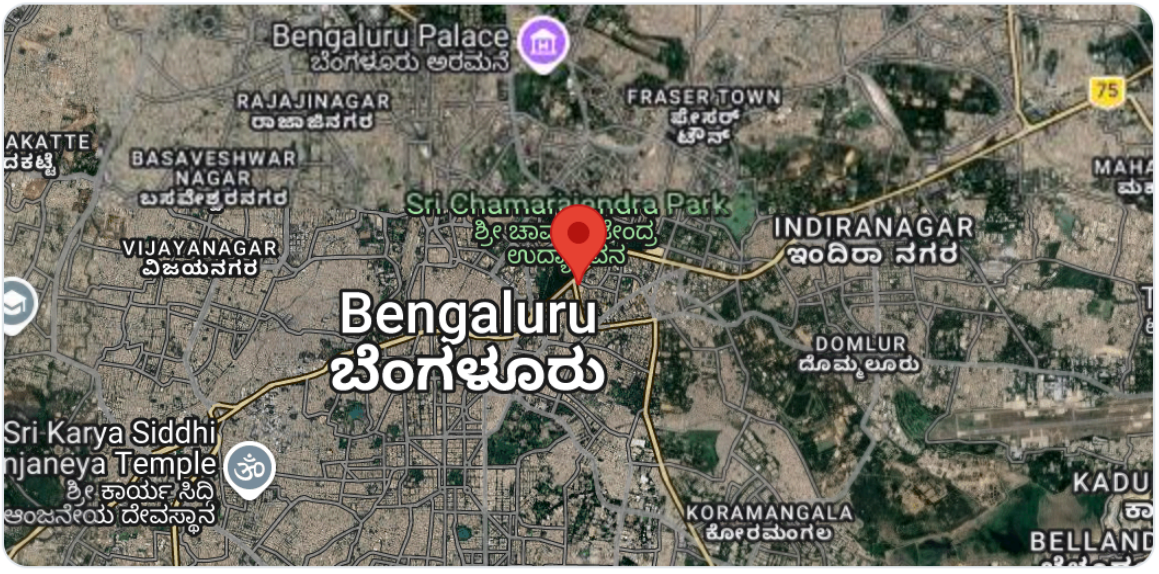

Google Maps link or coordinates

https://www.google.com/maps/place/12%C2%B

Place pin

Best for vacant land and anything with no street address. In Google Maps, long-press the plot, tap **Share**, then paste the link here.

Or find the address above on the map

Paste a map link above, or tap the map to place the pin on the plot.

Task ID

2609012682

Assigned to (optional)

Ravi

Pasting the link you copied from Google Maps

CHECK

The *Place pin* button is ready to press.

4 The pin lands on the plot

The map jumps to the land and drops the pin on it, and the app confirms the exact spot it used underneath the box.

The map is set to satellite view, because vacant land shows as an empty space on a road map. On the satellite picture you can see the plot itself and check the pin is on the right one.

The town and PIN code fill themselves in from the pin. You did not have to look them up, and you can type over them if you would rather use your own wording.

If the pin is slightly off, drag it or tap the map to move it. This spot is what your staff have to reach before the camera will turn on.

New field visit

Name the property and put the pin on it. For vacant land with no address, paste a Google Maps link below. The representative can only take photos once they are standing there.

Property name or address

Vacant plot, Survey No. 42

No street address? Describe the plot instead — this is what the representative sees at the top of their screen.

Town or city

Moolakazhani

PIN code

603202

Google Maps link or coordinates

https://www.google.com/maps/place/12%C2%B

Place pin

Best for vacant land and anything with no street address. In Google Maps, long-press the plot, tap **Share**, then paste the link here.

Pin placed at 12.835472, 80.066889. Check it is on the right plot.

Or find the address above on the map

Drag the pin, or tap the map, so it sits exactly on the plot. The camera unlocks within 100 m of this pin.

Task ID

Assigned to (optional)

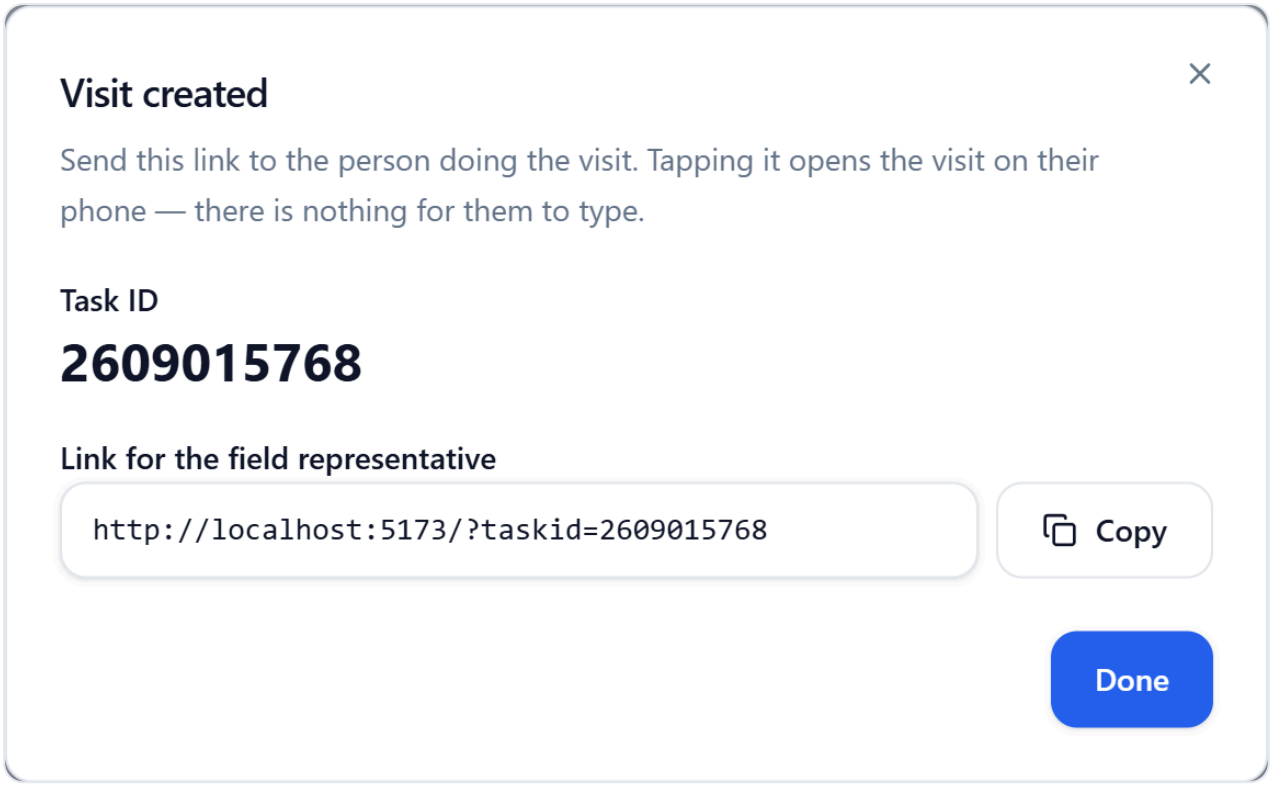

The pin on the plot, with the town and PIN code filled in for you

CHECK

The pin sits on your land, and the town and PIN code appear on their own.

5 Create it and copy the link

Press *Create visit*. You get a Task ID and a link to send to whoever is going out, exactly as you do for a property with an address.

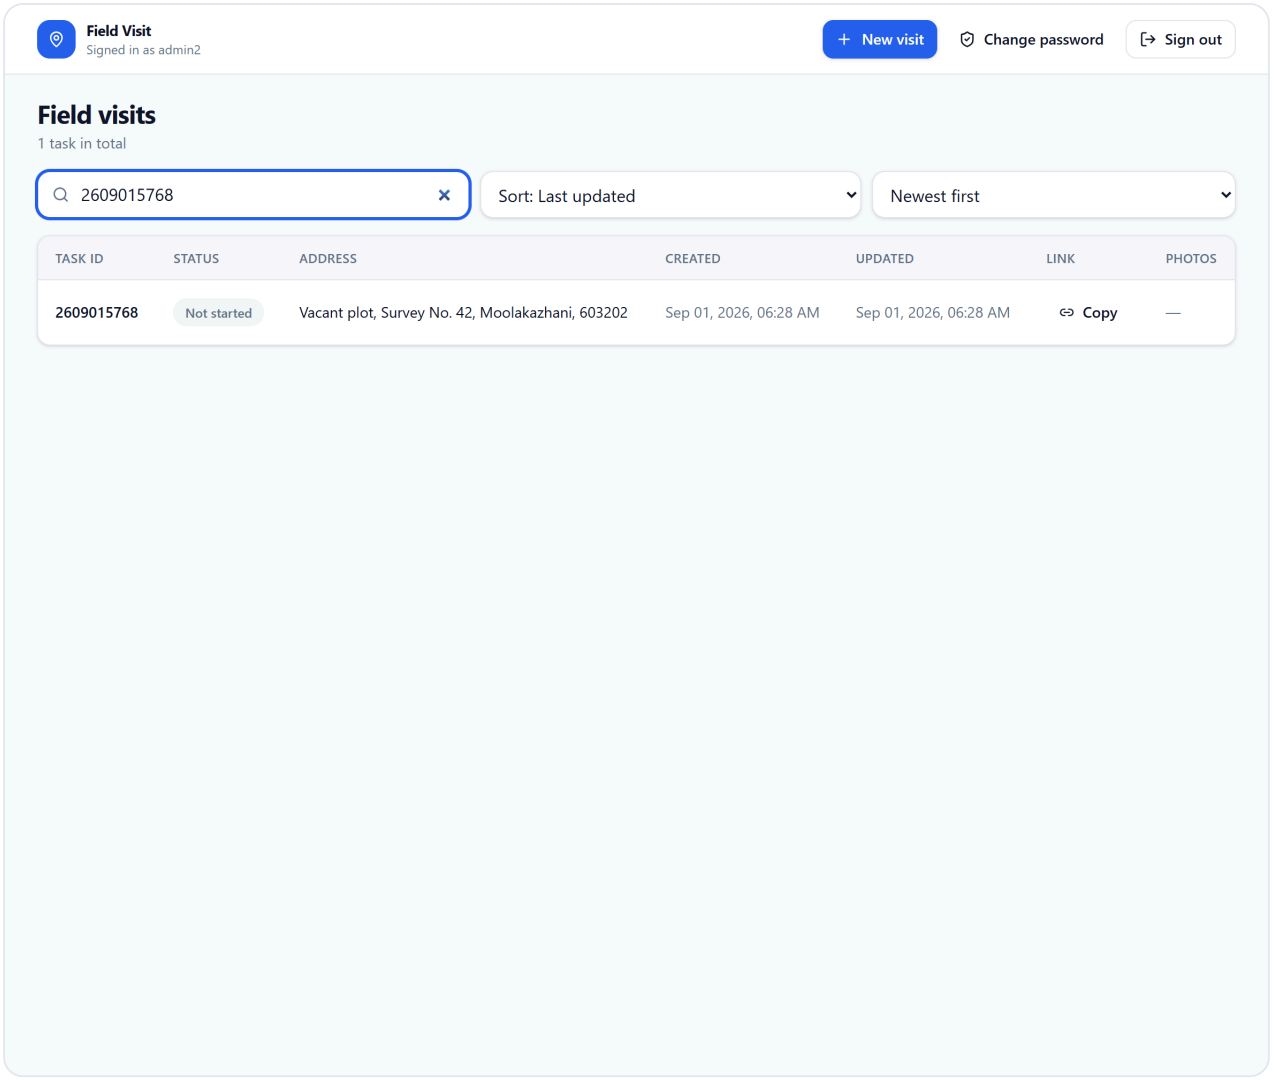

The visit is created, with a link to send out

CHECK

You get a Task ID and a link you can copy.

6 It appears in your list

The plot now sits in the list of visits alongside everything else, and you can search for it by Task ID in the usual way.

The vacant plot listed with all your other visits

CHECK

Searching the Task ID finds the plot.

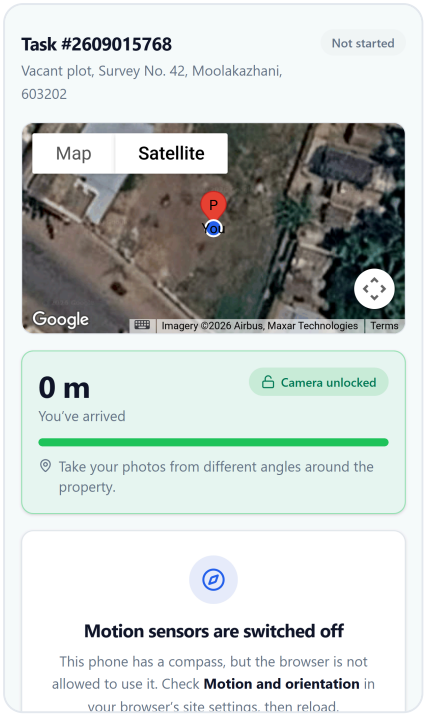

Part 3 · What your staff see

On a phone, standing on the land.

7 The plot opens like any other visit

They tap the link and see the name you gave the plot, the satellite map, and how far away they are. Everything after this — the ten photos, the video, the direction and time on each one — works exactly as it does for a building.

The camera still only turns on within 100 m of the pin, so the rule you asked for holds for land just as it does for property with an address.

Standing on the plot — the camera is unlocked

> **CHECK**
>
> The name you typed appears at the top, and the camera turns on when they arrive.

Sign-off

If all of these are true, vacant land is covered.

	WHAT YOU ASKED FOR
☐	A visit can be created for land with no building and no street address
☐	A Google Maps link can be pasted in, and the pin lands on the plot

WHAT YOU ASKED FOR	
☐	Coordinates can be typed in directly instead, if you prefer
☐	The plot can be named in your own words, and your staff see that name
☐	The town and PIN code fill in by themselves from the pin
☐	The pin can be dragged if it needs adjusting
☐	The visit appears in the list and can be searched by Task ID
☐	The camera still only works within 100 m of the plot

If anything does not work the way it is described here, just tell us the step number and what you saw, and we will put it right.
